

Better Cyber Risk management across Diverse Portfolios

Scalable Cyber Security Solutions for Private Equity and Venture Capital

Private Equity organizations face the challenge of cost-effectively managing cyber risk across a diverse set of PortCos.

Today, CISOs struggle to answer board-level questions in a straightforward way:

- What is our real-world picture of cyber-business risk?
- What does good look like?
- What is the right security budget?

Consultancy-based approaches struggle to scale critical security activities across your PortCos cost-effectively:

- Conduct security due diligence activities
- Maintain an up-to-date, consistent, and comparable view of cyber risk
- Ensure the right security roadmap and budget
- Maintain visibility and track performance and progress of roadmap delivery
- Quickly reassess and pivot strategies, roadmaps, and budgets when dynamics change

These challenges persist because assessments and frameworks are too technical, inconsistent, don't scale well, quickly get out-of-date, and are missing critical business, threat, and risk context.

Cyberseconomics solves this with the power of our HQBE SaaS platform, proven Cyberseconomics Consensus Cycle, and our elite team of veteran CISOs and security experts, supporting your team and PortCos – from initial assessments to 'right-sized' strategy, and program development to ongoing assurance.

Unprecedented
Visibility
Accountability
Consistency
Scalability
**of cyber risk and protection
across your PortCos.**

Finally.
